

NOTE:	<ul style="list-style-type: none"> - A list of references contains details only of those works cited in the text. - A bibliography lists sources not cited in the text but which are relevant to the subject and were used for background reading. - Before you compile your bibliography/reference list check with your lecturer/tutor for the bibliographic style preferred by the Academic Department. - A citation is an acknowledgement in your text of references that support your work. It is in the form of a number that correlates with a source in your reference list.
--------------	---

- There are many ways of setting out bibliographies and reference lists. The following are examples of **one style – the Vancouver System**. It is commonly used in medical and scientific journals.
- Your **reference list** should identify references cited (eg. book, journal article, pamphlet, internet site, cassette tape or film) in sufficient detail so that others may locate and consult your references.
- Your **reference list** should appear at the end of your essay/report with the entries listed numerically and in the same order that they have been cited in the text.
- If you have cited sources from the Internet, these should be in your reference list.
- The **bibliography** is a separate list from the reference list and should be arranged **alphabetically** by author or title (where no author is given) in the Vancouver Style.
- **Punctuation marks** and **spaces** in the reference list and citations are very important. Follow the punctuation and spacing exactly in the examples given.

■ INDICATING REFERENCES IN THE TEXT OF YOUR ESSAY

** It is important to **BE CONSISTENT** when you are referencing. **

- **In the Vancouver Style, citations within the text of your essay/paper are identified by Arabic numbers in round brackets. This applies to references in text, tables and figures. e.g. (2) – this is the style used by the referencing software Endnote.**
- The identification of references **within the text** of your essay/paper may vary according to the preferred style of the journal or the preferred style of the department or lecturer. For example **superscript** may be preferred when referencing.
- The Vancouver System assigns a number to each reference as it is cited. A number must be used even if the author(s) is named in the sentence/text.
Example: Smith (10) has argued that....
- The **original number assigned** to the reference is reused each time the reference is cited in the text, regardless of its previous position in the text.

- When **multiple references** are cited at a given place in the text, use a **hyphen** to join the first and last numbers that are **inclusive**. Use **commas** (without spaces) to separate **non-inclusive** numbers in a multiple citation eg. 2,3,4,5,7,10 is abbreviated to (2-5,7,10) **Do not** use a hyphen if there are no citation numbers in between that support your statement eg. 1-2.
- The placement of citation numbers within text should be carefully considered, for example a particular reference may be relevant to only part of a sentence. As a general rule, reference numbers should be placed outside full stops and commas, inside colons and semicolons; however, this may vary according to the requirements of a particular journal.

Examples:

There have been efforts to replace mouse inoculation testing with invitro tests, such as enzyme linked immunosorbent assays (57,60) or polymerase chain reaction,(20-22) but these remain experimental.

Moir and Jessel maintain “that the sexes are interchangeable.”(1)

■ CITING INTERNET and OTHER ELECTRONIC SOURCES

- This includes software and Internet sources such as web sites, electronic journals and databases.
- These sources are proliferating and the guidelines for citation are developing and subject to change.
- The following information is based on the recommendations of the National Library of Medicine.
- The **basic form** of the citations **follow the principles listed for print sources** (see above).

In the case of sources that may be subject to alteration it is important to acknowledge the **DATE THE INFORMATION WAS CITED**. This is particularly true for web sites that may disappear or permit changes to be made and for CD-ROMS that are updated **during** the year.

Journal on the Internet

NOTE:	Follow the same procedure for citing print journals as for electronic journals regarding date, volume pages and journal title
