

S. Giuliano Milanese, April 9th, 2020

PROPRIETARY CERTIFICATE

I, the undersigned, Guido Ivo Tissi, Chief Executive Officer of TISSI SRL a Socio Unico company, whose registered office is located in Via Liberazione 64 20098 San Giuliano Mil.se (MI) ITALY

CERTIFY THAT

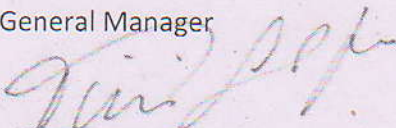

The STERYBOX equipment range are proprietary products exclusively manufactured by our company. STERYBOX was developed by TISSI SRL a Socio Unico company and it is based on PCT patent, fully owned by us, and it is not licensed or sublicensed to any third party. The system is developed, produced and marketed by our company and has no equivalent or similar competitor of its kind concept and design. The installation of the systems are also performed by our distributors qualified personnel.

This unique system benefits from a combination of four features :

- 1) STERYBOX is an innovative device for reducing the bacterial charge of the air in environments at risk of aerial contagion. This device uses the well-known properties of the UV-C germicidal radiation at 254 nanometres (UVGI) and, specifically, the capacity of denaturing the genetic material of the cells it strikes, by inactivating every type of microorganism present in the air (bacteria, germs, moulds, viruses).
- 2) The germicidal radiation, which is isolated inside the device, prevents the spreading of the dangerous UV-C rays in the environment and it eliminates any side effect detrimental to health.
- 3) The air is aspirated by the device through noiseless axial fans and it is then submitted to an intense UV-C radiations field through a patented coil system; the air is purified and ready to be released into the environment, thanks to a continuous change of air.
- 4) STERYBOX system combines optimal performances with an incredibly small size compared to standard linear flow devices. The UV-CHRIS - UltraViolet High Reflecting Coil Irradiation System is a new, patented coil system.

To serve and to assert that right.
